Nabilah Aysyah

Quality Assurance | Software Quality | Technical Background
Bandung, West Java, Indonesia

Summary

I'm a Quality Assurance with a background in web development and an interest in how digital products are built, tested, and improved. Starting from development gave me a good understanding of what happens behind a product, while working in QA taught me to look at things from a different perspective — not just whether something works, but whether it works as intended and makes sense for the people using it. I've also had experience coordinating projects and working with clients, designers, and developers. These experiences made me realize that I enjoy being in the middle of different parts of a project, making sure requirements are understood, feedback is communicated clearly, and things keep moving forward. I value curiosity, clear communication, attention to detail, and continuous learning. I'm currently focused on growing further in Quality Assurance and project management while keeping my technical foundation in development. In the long run, I hope to contribute to building products that are not only functional, but also reliable, well-organized, and genuinely useful.

Experience

Emveep

2 years

Project Manager

February 2026 - August 2026 (7 months)

Indonesia

Managed and coordinated the development of a dynamic company profile website for an international client.

- Coordinated communication between the client, designers, and developers.
- Gathered and clarified client requirements, feedback, and revision requests.
- Coordinated tasks and priorities with the development and design teams.
- Followed up on project progress, tasks, and deadlines.

- Coordinated website content and feature updates based on client requirements.
- Assisted with testing, revisions, and final delivery.

Quality Assurance Engineer

March 2025 - August 2026 (1 year 6 months)

Bandung

During my tenure as a Quality Assurance Engineer at Emveep, I was tasked with ensuring the stability of complex web applications for a diverse portfolio of international clients requiring 100% adherence to global quality standards. To achieve this, I orchestrated comprehensive End-to-End (E2E) testing protocols and engineered detailed technical documentation while collaborating in an Agile environment to identify and resolve 50+ critical bugs before market release . This proactive approach significantly improved product stability and user experience, resulting in a 95% increase in testing efficiency and seamless compliance with all stakeholder technical requirements .

Full Stack Engineer

September 2024 - March 2025 (7 months)

Indonesia

Developed and maintained a dynamic company website using JavaScript, focusing on both frontend and backend development.

- Developed website features and dynamic content based on project requirements.
- Worked on frontend and backend implementation to support website functionality.
- Integrated and managed dynamic content for different sections of the website.
- Collaborated with the team to implement designs and requested features.
- Tested and debugged website features to ensure they worked as expected.
- Used Git for version control and project collaboration.

Emveep

Web Developer & QA Intern

July 2023 - September 2023 (3 months)

Tasked with building a Point of Sale (POS) system from scratch, I took ownership of the full Software Development Life Cycle (SDLC) utilizing Node.js and Vue.js . I pioneered the development of the system and standardized the penjaminan kualitas (QA) lifecycle by authoring 50+ comprehensive E2E test cases to guarantee the application was 100% production-ready.

This meticulous process enabled the delivery of a high-quality MVP within 3 months, transitioning from initial coding to deployment with zero critical defects and establishing a reliable technical foundation for the application.

Education

SATU University

Information Systems · (September 2025)

SMK BPI Bandung
